Jinglin Shan

UI/UX Designer/Front-end Developer

PROJECTS

Google Map Based On-campus Event App | 2017.3 - 2017.6
Senior Project (In draft)
This project will be extending Google Map API so that Stanford students can schedule and view on-campus events based on time and place.

The Openproof Project | 2017.5 - 2017.11
Summer Internship
During the ten-week internship, I designed and implemented a modern user interface for the Openproof courseware website, which aimed at helping people with undergraduate logic curriculum from different aspects. I wrote most of the front-end code, and finalized UI for most back-end services.

HerStory | 2017.2 - 2017.3
Class Project for CS247 | Won *the Best Project in the Section*
This four-week project results in an app aiming at facilitating one-to-one interactions among patients at different stages of battling breast cancer. With HerStory, every user can write a post (called "chapters") chronicling their feelings during their journey. When composed, a chapter will be sent to another randomly selected users who matches the "author" in some way, and recipients can initiate a conversation.

AfrIdge | 2016.9 - 2016.12
Class Project for CS147 | First time of design iteration
This quarter long project aims at relieving family food waste by providing a solution to each daily habit (namely buying excessive food, forgetting food expiration date, forgetting foods in fridges, and not being able to find uses for foods) that may cause great food waste.

Stanford Newtype Anime Club | 2014.12 - 2016.6
Personal Project
The attempt to reconstruct this website started at the winter of my freshman year, and its design, together with code, has been upgraded for 4 times over the quarters according to different needs.

EDUCATION

Stanford University / 2014-2018
Bachelor of Computer Science

OBJECTIVE

Find a **full-time UI/UX designer** job where I can contribute my passion and skills, and learn and practice design process in industry.

WORK STYLE

VALUE USERS' NEEDS. Upon getting the project, I always conduct user research, or at least expert consultation if the resource is very limited.

PROPOSE SEVERAL DESIGN PLANS for one project which may sometimes be not conventional.

WORK OUT A REASON, mostly coming from users, for every design choice.
